Program Outline & Objectives

This course will include plenary and small group interactive breakout sessions with a broad summary at the end. Objectives include:

- discuss current and changing trends in the evaluation and management of patients with shoulder, elbow and wrist problems
- demonstrate enhanced physical exam, and injection skills related to the shoulder, elbow and wrist
- describe appropriate outpatient assessment, use of diagnostic imaging and management of common shoulder, elbow and wrist problems and fractures
- describe the appropriate referral practices between specialties and disciplines: which patients should be referred, to whom, when and how.

Final Program Registration

The detailed program brochure and registration form will be available by March 2010. If you do not receive the detailed program brochure by March 10th, 2010 please check one of these websites:
